durable, made of stainless steel

for indoor use

kills bacteria and viruses

The OMED-1 station is designed to disinfect enclosed areas.

The fumigator **sanitises the rooms** by fogging. Dry mist reaches all areas, particularly those that cannot be disinfected using conventional disinfection methods. OMED-1 has a simple panel to easily set the operating time of the station depending on the size of the room.

The room must be empty while the machine is working.

It is not allowed for any people and animals to stay in the room while it is disinfected.
